

BEHRINGER®

Pipe Supports For Industrial Applications

Forward

Introduction

Thank you for choosing Behringer, the world's leading manufacturer of Pipe and Tube supports. Behringer has been manufacturing pipe clamps and support systems for over 40 years, and has developed a reputation in the industrial and sanitary markets that is second to none. We have made developments and product improvements over the years both strengthening and broadening our product offering. This is evident in the breadth of our line and ability to accommodate new applications and designs. You can count on Behringer for all of your clamping requirements.

Product

Behringer Industrial Pipe and Tube Supports have natural vibration-dampening characteristics. This is important in pressure piping in order to reduce vibration, noise, and shock. This will effectively protect the system and its sensitive components from the damaging effects of these adverse system byproducts typically found in pressure piping systems.

Behringer offers several different series and within each series there are many different configurations available. We offer options for mounting such as welding, bolting, rail and strut mounting, double, and group mounting, etc. Behringer always welcomes a challenge, and would be happy to work with you to design a product that is custom-tailored to your application. This is where many of our developments are first generated, and helps to further progress the complexity of our product. Challenge us with your requirements.

Guarantee

Behringer Corporation, hereinafter called the "MANUFACTURER", guarantees that this product shall be free from defects in workmanship and materials. THIS GUARANTEE IS IN LIEU OF ALL OTHER GUARANTEES EITHER EXPRESSED OR IMPLIED, INCLUDING GUARANTEES FOR FITNESS FOR PURPOSE INTENDED. The MANUFACTURER'S liability is limited to the replacement of any materials which, after inspection by the MANUFACTURER at its sole option, are found to be defective. The MANUFACTURER will honor only those claims that are presented to it within one hundred eighty (180) days of the delivery of the materials to the purchaser. The MANUFACTURER SPECIFICALLY DISCLAIMS ANY AND ALL LIABILITY FOR CONSEQUENTIAL DAMAGES. The MANUFACTURER shall not be liable for any damages which arise out of the misuse or abuse of the products.

Applications

Behringer clamps are used in many different types of applications ranging from low pressure lubrication and water systems to high pressure hydraulic and process systems. Anywhere that there are pipes, tubes, or hoses are viable applications for Behringer clamps. Behringer clamps are used in the following markets and applications most frequently.

Mobile Equipment	Power Generation
Mining Equipment	Pulp and Paper
Offshore and Marine Applications	Industrial Hydraulics
Shipbuilding	Power Units
Instrumentation	Agricultural Equipment
Nuclear	OEM Machinery
General Construction	
Electrical / Mechanical Contracting	
Process Piping	
Pharmaceutical / Biotechnology	
Food and Dairy	
Beverage	

Assistance

Behringer Corporation has a competent and highly skilled staff of inside sales and customer service personnel available to assist you with any of your needs. Behringer can be reached in the following ways.

Post Mail: Behringer Corporation
17 Ridge Road
Branchville, NJ 07826
Telephone: +1 (973) 948-0226
Fax: +1 (973) 948-2562
Email: sales@behringersystems.com

Our regular business hours are Monday through Friday, 8AM - 5 PM Eastern Time. For after-hours service, please contact your regional sales manager.

Pipe Clamp Selection

Behringer's pipe clamps are available with many different mounting configurations and arrangements. In choosing a pipe clamp, there are five main required pieces of information; series, size, clamp pair material, hardware material, and mounting/hardware configuration.

Series Selection

In order to select the proper clamp, the first thing that must be determined is the series of clamp to be used. Refer to the series specification on pages 4-5 to see what clamp series are available, as well as the technical characteristics of those series. The most important factors to be considered are the operating pressure of the line to be secured, the weight being supported, and the dynamic load. Other considerations include size, environment, and application. For example, a 1" pipe for a hydraulic system operating at 2,000 psi would typically require the use of the standard series, but the heavy series may be selected if it will be required to support the weight of a large filter or other system component. Maximum weight loads and shearing forces can be found in the technical appendix. Also, the heavy series might be selected rather than the standard series if the line is on a piece of mining or mobile equipment that may see a very high amount of impact with other equipment or materials such as stones and metals. In Fig. 1 below you can see the suggested operating pressures by series. These suggested values take into consideration the shock and vibration that a typical hydraulic system operating at these pressures can deliver.

Fig. 1: General Pressure Guidelines by Series

Clamp Series	Suggested Operating Pressure
Standard	up to 2000 psi
Heavy	5000 psi for Single Heavy/10,000 psi for Double
Twin	up to 1500 psi
Heavy-4	5000 psi for Single Heavy/10,000 psi for Double

Size

The next important factor in the selection of the pipe clamp is the size of the line to be secured. Behringer clamps use a modular group size that consists of multiple OD sizes being available within the same group. Clamps are listed as pipe or tube sizes. The difference is in the standard measurements used to rate pipe and tube sizes. Pipe is rated by the inside diameter, and will have a larger outside diameter because of the wall thickness. For example, a 1 inch pipe has an OD of 1.315. This is a standard pipe OD size and is consistent of all hydraulic pipe, regardless of schedule. Tubing, on the other hand, is rated by the outside diameter. Therefore, a 1 inch tube will have an OD of 1.00 in. This is important in determining the size of the pipe clamp that will be selected. Also, the size may determine the series of clamp selected. For example, a low pressure line operating at 1,500 psi that is 6 inch pipe size is not available in the Standard Series, therefore the Heavy Series must be used.

Clamp Pair Material

The clamp pair material is the next thing that should be selected. Behringer's clamp pairs are offered in different materials; Polypropylene (PP), Santoprene (SP), Aluminum (AL), HDPE (NN), and High Temperature Cast Nylon (HT). The single most important determining factor of clamp pair material is operating temperature. The temperature ratings and other important specifications can be found in the technical appendix. Some materials are not available in all sizes or all series. Refer to the specific clamp pair selection charts from each series to see what is available in the required size. Other considerations for materials are compatibility with the environment and for aesthetic reasons, color.

Hardware Material

Once you have determined the series of pipe clamp and the size that is required, the next step is to determine the hardware materials that you will require. In the series selection pages, you will see that each series has a standard hardware material type. See Fig. 2 for standard hardware choices. The standard hardware is either plain carbon steel or zinc-plated steel. All Behringer clamps that are zinc-plated use a trivalent blue zinc plating, which is more environmentally friendly than typical hexavalent zinc plating, and is RoHS compliant. In addition to the standard hardware choices, Behringer offers stainless steel in 2 grades from stock. AISI 304 Stainless Steel (A2 - 1.4301/1.4305) is used in applications where stainless steel is required. This may be in an outside environment, because of chemical compatibility reasons, or because of requirements from the FDA or other regulatory committee. AISI 316 Ti Stainless Steel (A4 - 1.4401/1.4571) is a high grade stainless steel. The 316 Stainless is used in applications where it will come in contact with salt water or air with a high salt concentration such as offshore or marine applications.

Fig. 2: Standard Hardware Material by Series

Clamp Series	Code	Material
Standard	Z	Clear Zinc-Plated Steel
Heavy	C	Plain Carbon Steel
Twin	Z	Clear Zinc-Plated Steel
Heavy-4	C	Plain Carbon Steel

Pipe Clamp Selection

Mounting / Hardware Configuration

Behringer offers a multitude of mounting configurations and arrangement styles. Clamps can be mounted to support structure by either welding, bolting, rail-mounting, unistrut mounting, or stanchion and special securing plates. In addition, clamps can be stacked on top of each other, suspended from threaded rods, or any number of double and group positions can be made on multiple clamp weld plates, called Group Weld Plates (GRW). These options are not available for every series. Please check the ordering code for available mounting and hardware configurations. See below for examples of these mounting types.

Weld Mounting [STW, SWP, TWP]

Clamps are supplied with a weld plate for welding directly to the support structure. This is the most common form of clamp mounting, and is available in all series of pipe clamps. It is typically used with a cover plate and bolts, and is a commonly stocked item.

Standard Series:	STW
Heavy Series:	SWP / DWP
Twin Series:	TWP
Heavy 4 Series:	SWP / DWP

Rail Mounting [RAL / RCN]

Rail mounting makes installation of multiple lines of different group sizes an easy task. All clamps within one series can be mounted directly to a single channel using rail nuts that are designed for that rail. Behringer also makes proprietary rails that can accept the weld plates rather than the rail nuts. The rail uses are as follows.

- RAL-0 Standard and Twin Series Clamps with RCN-0 (standard) / RCN-T0 (twin)
- RAL-1 Standard and Twin Series with STW RCN-1 (standard) / RCN-4 (twin)
- RAL-2 Heavy Series Clamps with SWP (H3-H5)
- RAL-3 Heavy Series Clamps with SWP (H6)
- RAL-4 Heavy Series Clamps with RCN

Bolt Mounting with Base Plates [BAP]

Clamps are supplied with a base plate for applications where the clamp cannot be welded into position. This is commonly used to mount the clamps to non-metallic surfaces such as wood or drywall. However, base plates can be welded into position if required. Base plates are available in the standard series and heavy series.

Strut Mounting (UCN)

Behringer clamps can also be supplied with strut nuts (UCN) for mounting to standard strut channel. The new spring-loaded nuts are adaptable to any strut channel that is 1-5/8" wide. The depth of the channel is not important, as the UCN clips attach with a spring loaded tension on the top of the channel. Unistrut adaptation is available for all series of pipe clamps.

Multiple Clamp Weld Plates [DOW, GRW]

For multiple lines, Behringer offers double weld plates or group weld plates. The double weld plates create a double clamp that allows for the convenience of welding only one plate, but the strength and durability of using standard series hardware with individual clamp halves and 4 hex bolts. Group weld plates can accommodate between 3-10 positions, depending on the application. This is beneficial for keeping a tightly regimented center distance on the piping or tubing where multiple lines are run along the same plane. For both the double and group weld plates, all clamps to be fitted to the same plate must be within the same hardware group size.

Stacking Kits

Stacking kits consist of a set of clamp halves, stacking bolts, and a safety plate. A stacking kit is everything that is needed to take an existing clamp and make it one level taller. You use the hardware from the existing clamp; remove the cover plate, clamp halves, and hex bolts from the existing clamp, insert the stacking kit onto the bottom fixture (weld plate, rail nuts, etc...), and then replace the existing clamp hardware on top. Multiple stacking kits can be added to increase the number of clamps stacked on top of each other. Stacking kits are available in all series.

Pipe Clamp Series Specifications

Vibration-Dampening Pipe Clamps

Behringer's vibration-dampening pipe clamps are manufactured in different series for use in many different applications. The core range of pipe clamps encompasses Standard Series, Heavy Series, Heavy-4 Series, and Twin Series. They meet ASTM, Shipbuilding, Nuclear, Coast Guard, and other specifications.

Standard Series Pipe Clamps

Range: 0.25 in. (6.2 mm) through 4 in. (102 mm) OD
Pressure: 2,000 psi
Material: Zinc-plated, 304SS, 316SS, Carbon Steel
Clamp Halves: Polypropylene, Santoprene, Aluminum

Standard series pipe clamps can withstand the shock and vibration that a hydraulic system operating at up to 2,000 psi can deliver. Standard hardware is zinc-plated steel, unless otherwise noted. Also available from stock are 304 SS and 316 SS hardware. The standard series is offered in a multitude of configurations, such as weld-mounting, bolt-mounting, rail-mounting, stacking, double weld-mounting, and group weld-mounting. Many other options are possible with existing hardware, and custom arrangements are always a welcomed challenge.

Heavy Series Pipe Clamps

Range: 0.25 in. (6.3 mm) through 8.625 in. (219 mm)
Pressure: 5,000 to 10,000 psi
Material: Plain Carbon Steel, 304SS, 316SS, Zinc Plated
Clamp Halves: Polypropylene, Santoprene, Aluminum

Heavy series pipe clamps can withstand the shock and vibration that a hydraulic system operating at up to 5,000 psi can deliver. With the use of the Double Heavy design, lines with operating pressure of up to 10,000 psi can be accommodated. Standard hardware material is un-plated carbon steel. Also available are 304 SS and 316 SS, as well as zinc-plated hardware. The heavy series can be mounted using a weld plate, baseplate, rails, and stacking kits. Many other options are possible with existing hardware, and custom arrangements are always a possibility.

Twin Series Pipe Clamps

Range: 0.25 in. (6.3 mm) through 1.66 in. (42 mm)
Pressure: 1,500 psi
Material: Zinc Plated, 304SS, 316SS, Plain Carbon Steel
Clamp Halves: Polypropylene, Santoprene

The Twin Series is an excellent choice where multiple lines are required, while keeping a close center distance between the lines. Twin series pipe clamps can withstand the shock and vibration that a hydraulic system operating at up to 1,500 psi can deliver. Twin Series hardware material is zinc-plated steel. Also available from stock are 304 SS and 316 SS hardware. The twin series can be mounted using a weld plate, rails, and stacking kits. Many other options are possible with existing hardware, and custom arrangements are always an option.

Heavy-4 Series Pipe Clamps

Range: 8.625 in. (219 mm) through 30 in. (762 mm) OD
Pressure: 5,000 psi to 10,000 psi
Material: Un-plated Carbon Steel, 304SS, 316SS, Zinc-Plated
Clamp Halves: Polypropylene Others on request

Behringer's patented Heavy-4 Series pipe clamps are unrivaled in design and performance. Our clamps feature a unique 4-segmented plastic design which retains dimensional accuracy, resists stress and impact, absorbs vibration, and accomplishes a strong plastic-to-metal contact interface. This segmented plastic design is complemented by substantial steel support hardware.

Heavy-4 Series pipe clamps can withstand the shock and vibration that a hydraulic system operating at up to 5,000 psi can deliver, and with the use of the double heavy design they can accommodate lines with pressures up to 10,000 psi. Standard hardware is a low carbon steel. Also available are 304 SS and 316 SS as well as zinc-plated hardware. The Heavy-4 Series is only offered as a weld-mounted clamp.

Pipe Clamp Series Specifications

Other Pipe Clamps

Behringer also manufactures other clamping components and hardware. The Cushion Clamps mount low pressure lines to commonly found strut channel. Plastic saddle clamps and U-bolts are commonly used on large diameter low pressure piping. Behringer has roots in the metal fabrication industry, and we can easily manufacture customer-specific fabricated metal or injection molded products. We currently manufacture many other items for OEMs that are specially designed for that specific customer. We work closely with key personnel in the research and design stages, and can make prototypes in a very short time. Let us know what we can do for you.

Cushioned Pipe Clamps

Range: 0.25 in. (6.2 mm) through 6.625 in. (168 mm) OD
Pressure: Low pressure
Material: Zinc Plated, 304SS, 316 SS
Clamp Insert: Thermoplastic Elastomer

Saddle Series Pipe Clamps

Range: 0.84 in. (21 mm) through 30 in. (762 mm)
U-Bolt Material: Zinc Plated, 304SS, 316SS
Saddle Material: Polypropylene, UHMW

Behringer's cushioned clamps are designed for low pressure applications such as conduit, water, waste, and other non or low pressure lines. They easily mount to standard strut channels that are available in almost every industrial and many mobile applications. The standard hardware material is zinc-plated steel. Also available are 304 SS and 316 SS hardware. The cushion is manufactured from a thermoplastic elastomer material that is designed to reduce vibration and noise, while providing constant reliability in operating temperatures to 275 degrees F.

The Saddle Series pipe clamps consist of a heavy duty plastic saddle and a U-bolt with 4 hex nuts. The saddle series allows for movement due to vibrations and thermal expansion and contraction. The plastic saddle eliminates the metal-to-metal contact of the piping on the support structure, preventing costly damage to pipe installations. Behringer's Saddle Series clamps are typically used in shipbuilding, offshore and marine vessels, chemical plants, or wherever large diameter low pressure piping is installed. Behringer's saddle clamps are available in 2 different designs; Long Saddle and Short Saddle. The Long Saddle (shown above) extends past the u-bolt legs, and has holes for the legs to be inserted into. The Short Saddle does not extend to the u-bolts, and sits on the support structure or is held in place with location pins.

Custom Pipe Clamps

Range: Any
Pressure: Any
Material: Any
Clamp Insert: Any

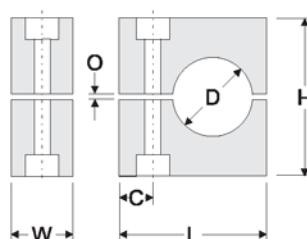

Customization is an easy task for Behringer's vast experience in custom metal fabrication and injection molding. If you have ideas about a custom-made product, we can easily and quickly take concepts and turn them into prototypes and ultimately production items. Behringer currently manufactures custom products for major OEM manufacturers in the mobile, offshore, industrial, and construction markets. Some custom items are a variation of a standard item, and others are completely different from our cataloged items. Let Behringer work for you to help resolve any of your fastening or clamping requirements.

Standard Series Pipe Clamps

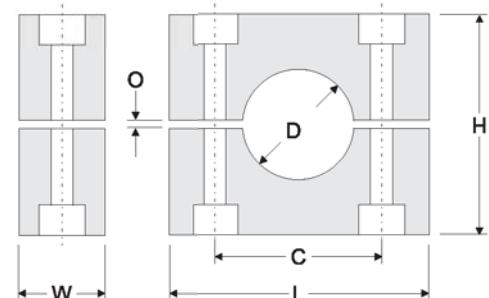

Behringer's clamp pairs are available in different materials and incorporate a modular insert by group size. Standard Series pipe clamps are available in sizes from $\frac{1}{4}$ in. (6.35mm) through 4.5 in. (114mm) outside diameter sizes, and various materials such as polypropylene, Santoprene, and aluminum.

Standard Series Pipe Clamps

Ordering Examples

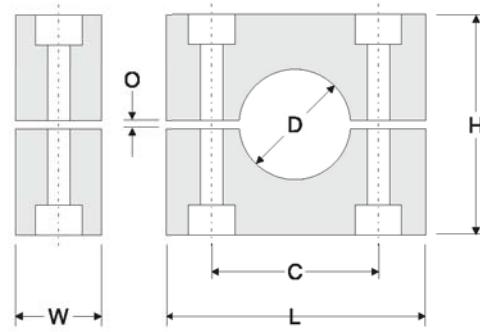

Heavy Series Pipe Clamps

Behringer's clamp pairs are available in different materials and incorporate a modular insert by group size. The robust Heavy Series design is larger and thicker than the Standard Series, and is designed for the toughest applications. Heavy Series pipe clamps are available in sizes from $\frac{1}{4}$ in. (6.35mm) through 8.625 in. (219mm) outside diameter sizes, and various materials such as polypropylene, Santoprene, and aluminum. The clamp bore is offered in both the ribbed design for all sizes and now with a smooth bore design through group H6.

Ribbed Design

Smooth Bore

Twin Series Pipe Clamps

Behringer's clamp pairs are available in different materials and incorporate a modular insert by group size. The Twin Series is available in sizes from $\frac{1}{4}$ in. (6.35mm) through 1.660 in. (42mm) outside diameter sizes. The design of the twin series has 2 holes in one clamp, making it ideal for dual runs of pipe, tubing, or hose.

Twin Series Pipe Clamps

Ordering Examples

Heavy-4 Series Pipe Clamps

Behringer's patented Heavy-4 Series pipe clamps accommodate pipe sizes from 8 through 30 inch. They feature a unique four-segmented plastic design which retains dimensional accuracy, absorbs vibration, resists stress and impact, and accomplishes a strong plastic-to-steel interface, strongly securing the largest pipes with ease. Substantial metal plates and bolts complement this heavyweight of the pipe clamp world.

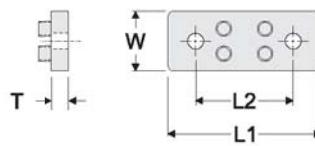

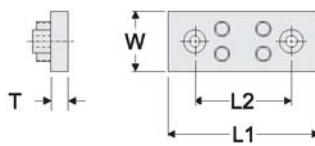

Clamp Pair Material Codes (*)					
P	[PP] Polypropylene Black Color	S	[SPL] Santoprene Beige Color	A	[AL] Aluminum Aluminum Color
***Please Note: For aluminum material, the clamp design will incorporate 2 halves, rather than a 4-segment design. For Santoprene material, minimum quantities may apply.

Cushion Clamps

Cushioned Clamping Systems

Berhinger now offers a complete line of cushioned clamps. Cushioned clamps are typically used in pneumatic, refrigeration, HVAC, and some low pressure hydraulic lines. Berhinger's cushioned clamps also eliminate metal to metal contact between the fluid lines and the support hardware. Standard material for the hardware is a clear trivalent zinc plated steel with options for both 304 and 316 grades stainless steel. Additional special options include aluminum and powder coating.

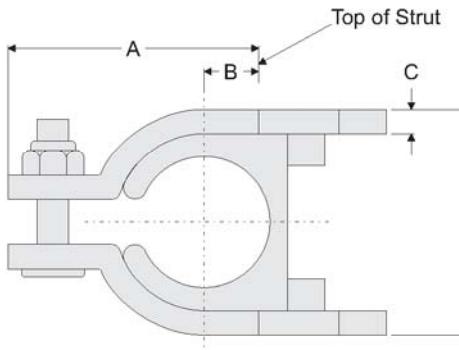

Specifications

Cushion:

Thermoplastic Elastomer

-65°F to 275°F operating temperature

Hardware:Fits industry standard strut channel
with 1-5/8 in. width.

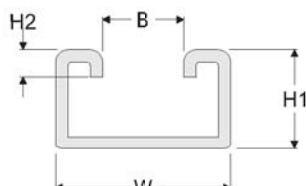

Cushion Ordering

Order Number	Material
CC	-

Hardware Material	
Z	Electro-Zinc Dichromate Plating
T	AISI 304 Stainless Steel (A2 - 1.4301/1.4305)
X	AISI 316/316Ti Stainless Steel (A4 - 1.4401/1.4571)

To order, use the ordering code above. Fill in the order number from the light blue shaded boxes in the chart to the right. Then add the material designation from the Hardware Materials chart above.

Ex. For 1 in. pipe with zinc plated hardware the order number is CC1315-Z.

T4		9	300	12	300	
T5		6	300	6	300	

Note: All tightening torques and static shearing forces apply to clamps with cover plates and hex bolts and are according to DIN3015-10. Pipe sliding starts when the load values "P" are reached.

Technical Appendix

Recommended Spacing

Recommended Spacing

Pipe or Tube OD	Operating Pressure	Recommended Spacing	Operating Pressure	Recommended Spacing
0.250 in. to 0.675 in	up to 3000 psi	5 - 7 Ft.	over 3000 psi	3 - 5 Ft.
0.750 in. to 1.050 in.	up to 3000 psi	6 - 8 Ft.	over 3000 psi	4 - 6 Ft.
1.125 in. to 1.500 in.	up to 3000 psi	7 - 9 Ft.	over 3000 psi	5 - 7 Ft.
1.750 in. to 2.500 in.	up to 3000 psi	8 - 10 Ft.	over 3000 psi	6 - 8 Ft.
2.750 in. to 3.500 in.	up to 3000 psi	9 - 11 Ft.	over 3000 psi	7 - 9 Ft.
4.000 in. to 4.500 in.	up to 3000 psi	10 - 12 Ft.	over 3000 psi	8 - 10 Ft.
5.563 in. to 6.625 in.	up to 3000 psi	11 - 13 Ft.	over 3000 psi	8 - 11 Ft.
6.625 in. to 8.625 in.	up to 3000 psi	12 - 14 Ft.	over 3000 psi	9 - 11 Ft.
10.750 in. to 12.750 in.	up to 3000 psi	13 - 15 Ft.	over 3000 psi	8 - 10 Ft.
13.750 in. to 19.750 in.	up to 3000 psi	14 - 16 Ft.	over 3000 psi	10 - 12 Ft.

Recommended Mounting Practices

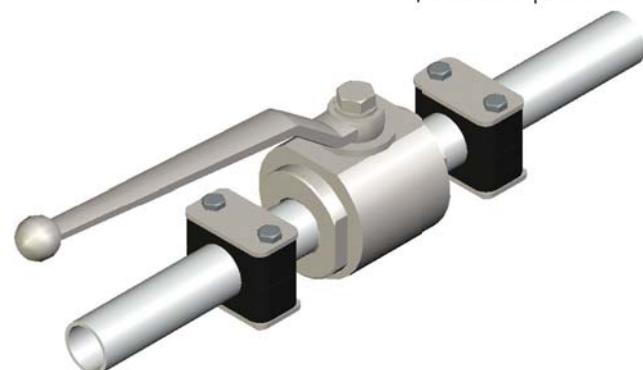

Bends

Behringer recommends that all pipe bends be supported by clamps placed as close to the bend as possible. The clamps should be directly after the connection (coupler, threaded connector, flange, or other).

Components

Behringer recommends that all system components be supported by clamps directly before and after the component in order to protect against vibrations and shock. The clamps should be located as close to the component as possible.
